ZAMBIA**

## **CUSTOMISING SPACE MANAGEMENT SOLUTIONS FOR YOUR NEEDS**

At Ufudu Zambia we believe that the competitive edge that sets us apart from our competitors is our ability to customise our space management solutions to cater to our clients' exact requirements and expectations, regardless of the size or scope of a project.

An example of this is evident in a recently completed project involving Speedspace, Ufudu Zambia's South African entity, which was contracted to design, supply and install a double-storey office block in Sasolburg to meet very specific requirements using the Ufudu Cabin range of products.

The client, NATREF, is South Africa's only inland crude oil refinery. The medium-sized technologically advanced refinery, highly efficient in refining heavy crude oil, is a joint venture between Sasol Oil and Total South Africa.

The internationally-recognised companies trusted Speedspace to deliver a large building comprised of 96 Ufudu Cabins. The double-storey structure has a footprint of 710 square metres with a total floor area of 1420 square metres, offering a comfortable, stylish and functional workplace for those in the new office.

The client asked for the ceiling to be replaced with a suspended ceiling to allow for cables, racks and trays to be installed due to the size of the building. In addition, based on the client's request, Speedspace installed a turnkey fire detection system including smoke detectors and a communication system.

All of those specialised requirements were provided for and Speedspace was able to complete the entire building's construction and have it signed off by the client within a four-month period, exceeding expectations and delivering a world-class space management solution timeously and efficiently.
