Ufudu providing electricity infrastructure to all rural Zambia

Ufudu Zambia is playing an important role in supporting government efforts to increase electricity access in the country by providing the structures necessary to house, enable and protect critical green energy generation infrastructure in remote rural areas.

The Rural Electrification Authority (REA) is a statutory body created by an Act of Parliament (No. 20 of 2003).

The REA's mandate is to provide electricity infrastructure to all rural areas in the country using appropriate renewable energy technologies to increase access and productivity while contributing to an improved quality of life for those living in such areas.

The REA's goal is to increase the electrification access rate in rural Zambia from the current 3% to 51% by 2030. This will be achieved by using emerging technologies including solar, hydro and the newly-explored wind power to generate the required energy.

These images illustrate an Ufudu Zambia unit that is ready to be used as part of this electrification project in Zambia. The newly procured converted container will be used as a solar power unit for a rural area called Ngabwe district which is located in the Northwestern part of Central Province.

The Rural Electrification Authority plans to install a solar unit that will supply energy to a targeted number of housing units. Depending on how this initial solar unit performs, REA may choose to extend the exercise to other targeted areas and Ufudu Zambia is ready to support them in their electrification efforts with further space management solutions designed to enable sustainable electricity generation in rural Zambia.

Please find our current retail pricing below, available to all our clients in Zambia. Our UFUDU Container Solutions are available for purchase or rental. We offer fast delivery and professional installation.
